

FIELD NOTES

Illinois State Geological Survey

(1230)

1927.

South bank of Hodges Creek, SW/4 of section.

About 12' of greenish sandy shale exposed.

Loose blocks of gray limestone probably from below Worthen's #4 coal. Chaetetes very abundant.

Weller's Macoupin County fossil collection #6.

About middle E/2 section. In hollow north of local coal mines.

Two limestones exposed above the horizon of Worthen's #5 coal.

Top of second limestone about 10' above top of lower. Intervening beds probably shale most exposed. Fusulinas abundant.

Hodges Creek locality--see Worthen.

Weller's Macoupin County fossil collection #3.
