

FIELD NOTES

Old coal strip pit. Not over 4'of coal exposed Where exposed covered by white top-and top badly broken by shale lenses.

Elsewhere coal seems to be capped by soapstone 8 feet exposed but contact with coal not exposed. In one place noted black slate below soapstone.

Coal altitude top 465. Possibly little dip NW.

Probably neither 5 or 6 but 5a.

Very variable and does not lie level dipping east

The black soapstone shale appears to laterally change into one coal and west into black slate in part.
