COAL MINE LOCATION AND DATA

FIELD NOTES

Illinois State Geological Survey

1884 Coal Report:

B. L. DORSEY & SON'S SHAFT.

This shaft is located within the corporate limits of Gillespie, and on the line of the Indianapolis and St. Louis Railroad. The shaft is 346 feet deep, the coal having an average thickness of $7\frac{1}{2}$ feet, and the works are opened on the double-entry plan. The air is split for each set of entries. The company employs, on an average, 80 miners. This company has sunk an escapement shaft during the year, and put up a 4-foot Murphy fan for ventilating purposes. The coal is hoisted by twin engines, 16x30, of Litchfield manufacture. The engines are on first motion, the hoisting drum 8 feet in diameter, ropes $1\frac{1}{8}$ inches. Everything is in first-class order around the mine.

B. Dorsey, Manager; Alexander Butters, Underground Manager.

1885 Coal Report:

DORSEY COAL CO.

This shaft has not been worked since the 1st of March, owing to the strike in the Staunton district. The underground works are in good condition; ventilation good, secured by a Murphy fan. Ladders have not yet been put into the new escapement shaft, but a notice has been served on the company to have them supplied.

S. Dorsey, Superintendent.

A. Butters, Manager.
